

Driving sustainable practices through data-driven insights

**ESG Emissions Intelligence  
and Sustainability Solutions**

# Problem

# Challenges in ESG Emissions Data

## Incomplete Emissions Disclosure

Many companies do not fully report Scope 1, 2, and 3 emissions, causing significant data gaps for stakeholders.

## Lack of Data Transparency

Inconsistent and fragmented reporting hinders comparability across sectors and regions, reducing trust in ESG data.

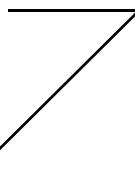

## Inefficient Workflows

Manual and slow processes complicate emissions tracking, adding inefficiency and delaying actionable insights.

## Systemic Risks and Compliance Issues

Data gaps create risks for investments and sustainability goals, while hindering regulatory compliance and risk assessment.

# Solution: Sustainability Insights & Emissions Estimation Engine

# Unified Emissions Intelligence Platform

## Machine Learning Emissions Estimation

The platform uses machine learning to estimate missing Scope 1 and Scope 2 emissions, improving ESG reporting completeness.

## Industry and Country Benchmarking

Provides benchmarking across 20 sectors and country-level comparisons to help organizations assess their emissions performance globally.

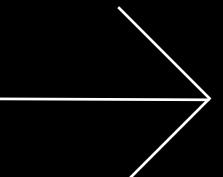

## Detailed Emission Source Analysis

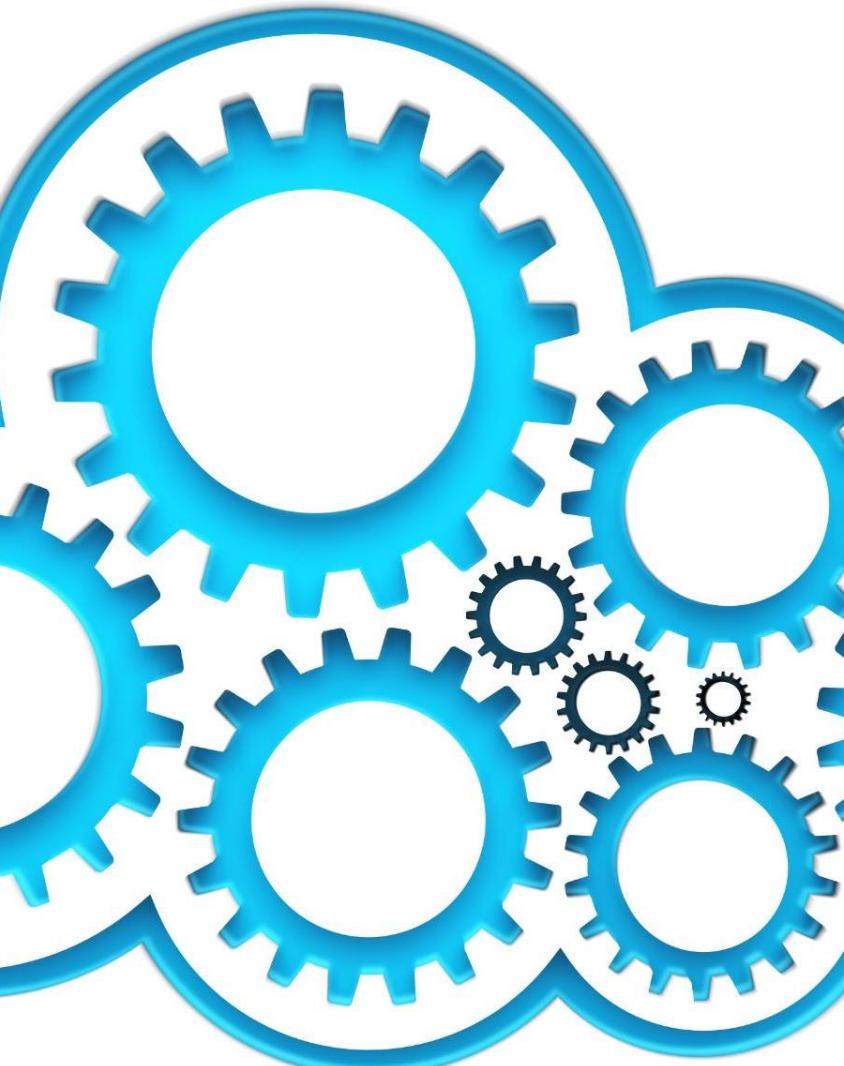

Offers granular insights into emission drivers like combustion, electricity, logistics, and refrigerants for targeted sustainability actions.

## AI-Powered Reduction Recommendations

Includes AI-generated recommendations with estimated carbon savings to guide effective emissions reduction strategies.

# How It Works (MVP Flow)

# Data Processing and Model Workflow

## **Data Ingestion and Feature Engineering**

Clients provide financial, operational, and emissions data which is processed into derived metrics for analysis.

## **Multi-Model Ensemble Prediction**

Regression, KNN, and XGBoost models combine to predict emissions with confidence intervals ensuring accuracy.

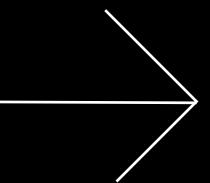

## **Insights and Dashboard Visualization**

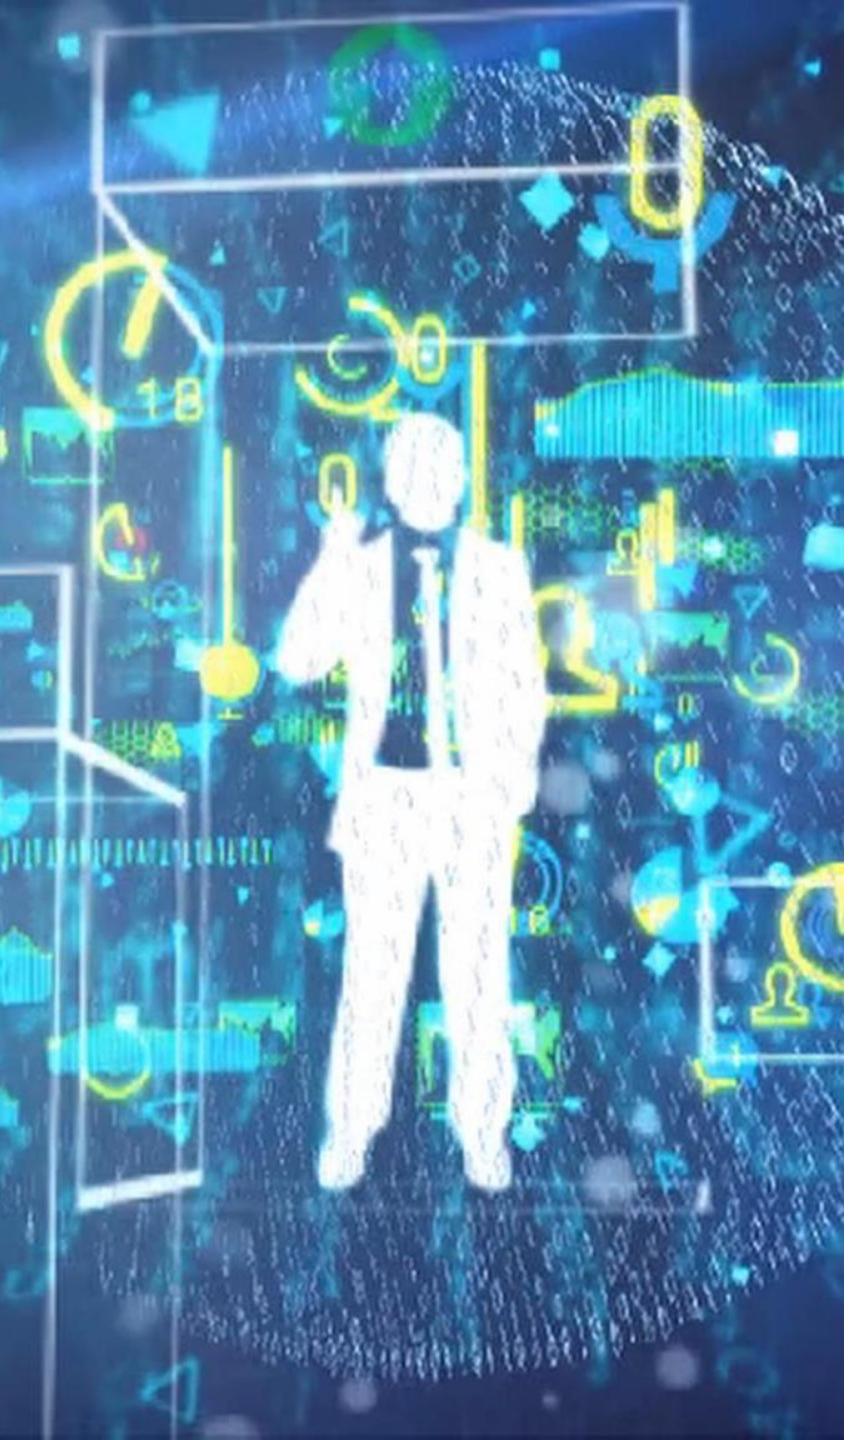

The model outputs are transformed into actionable insights displayed on dashboards for emission breakdowns and benchmarking.

## **Comprehensive Emissions Reporting**

Final report generation supports decision making even with partial or missing emissions disclosures.

# Why It Matters

# Impact on Stakeholders

## Financial Institutions Benefits

The solution fills ESG reporting gaps, supports regulations compliance, and enables precise climate risk scoring to enhance investment decisions.

## Corporate Insights and Action

Companies gain deep emissions insights to identify reduction opportunities and benchmark against peers, enabling net-zero strategies.

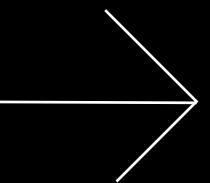

## Regulators and Auditors Support

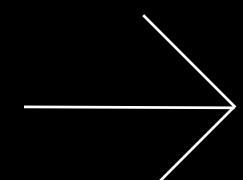

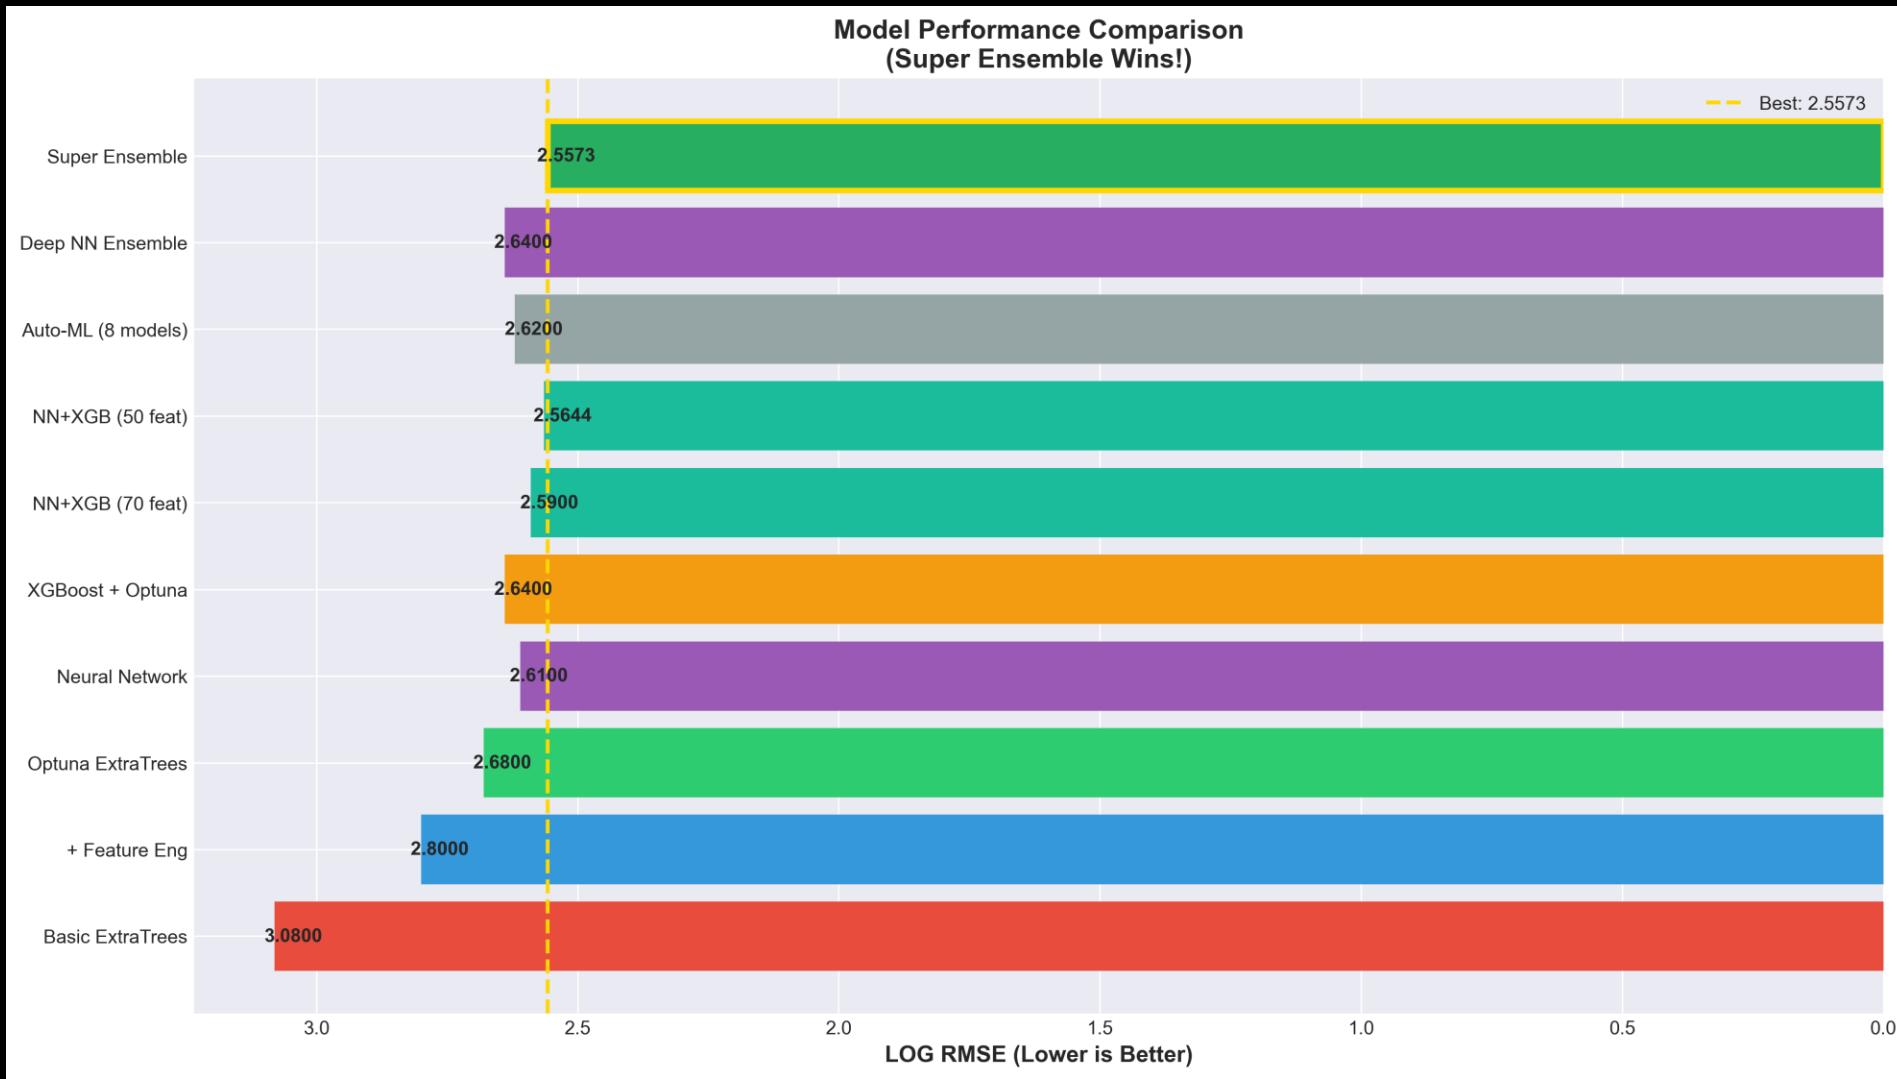

Regulators and auditors receive reliable estimates and transparent methodologies supporting disclosures in data-poor markets.

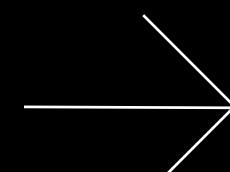

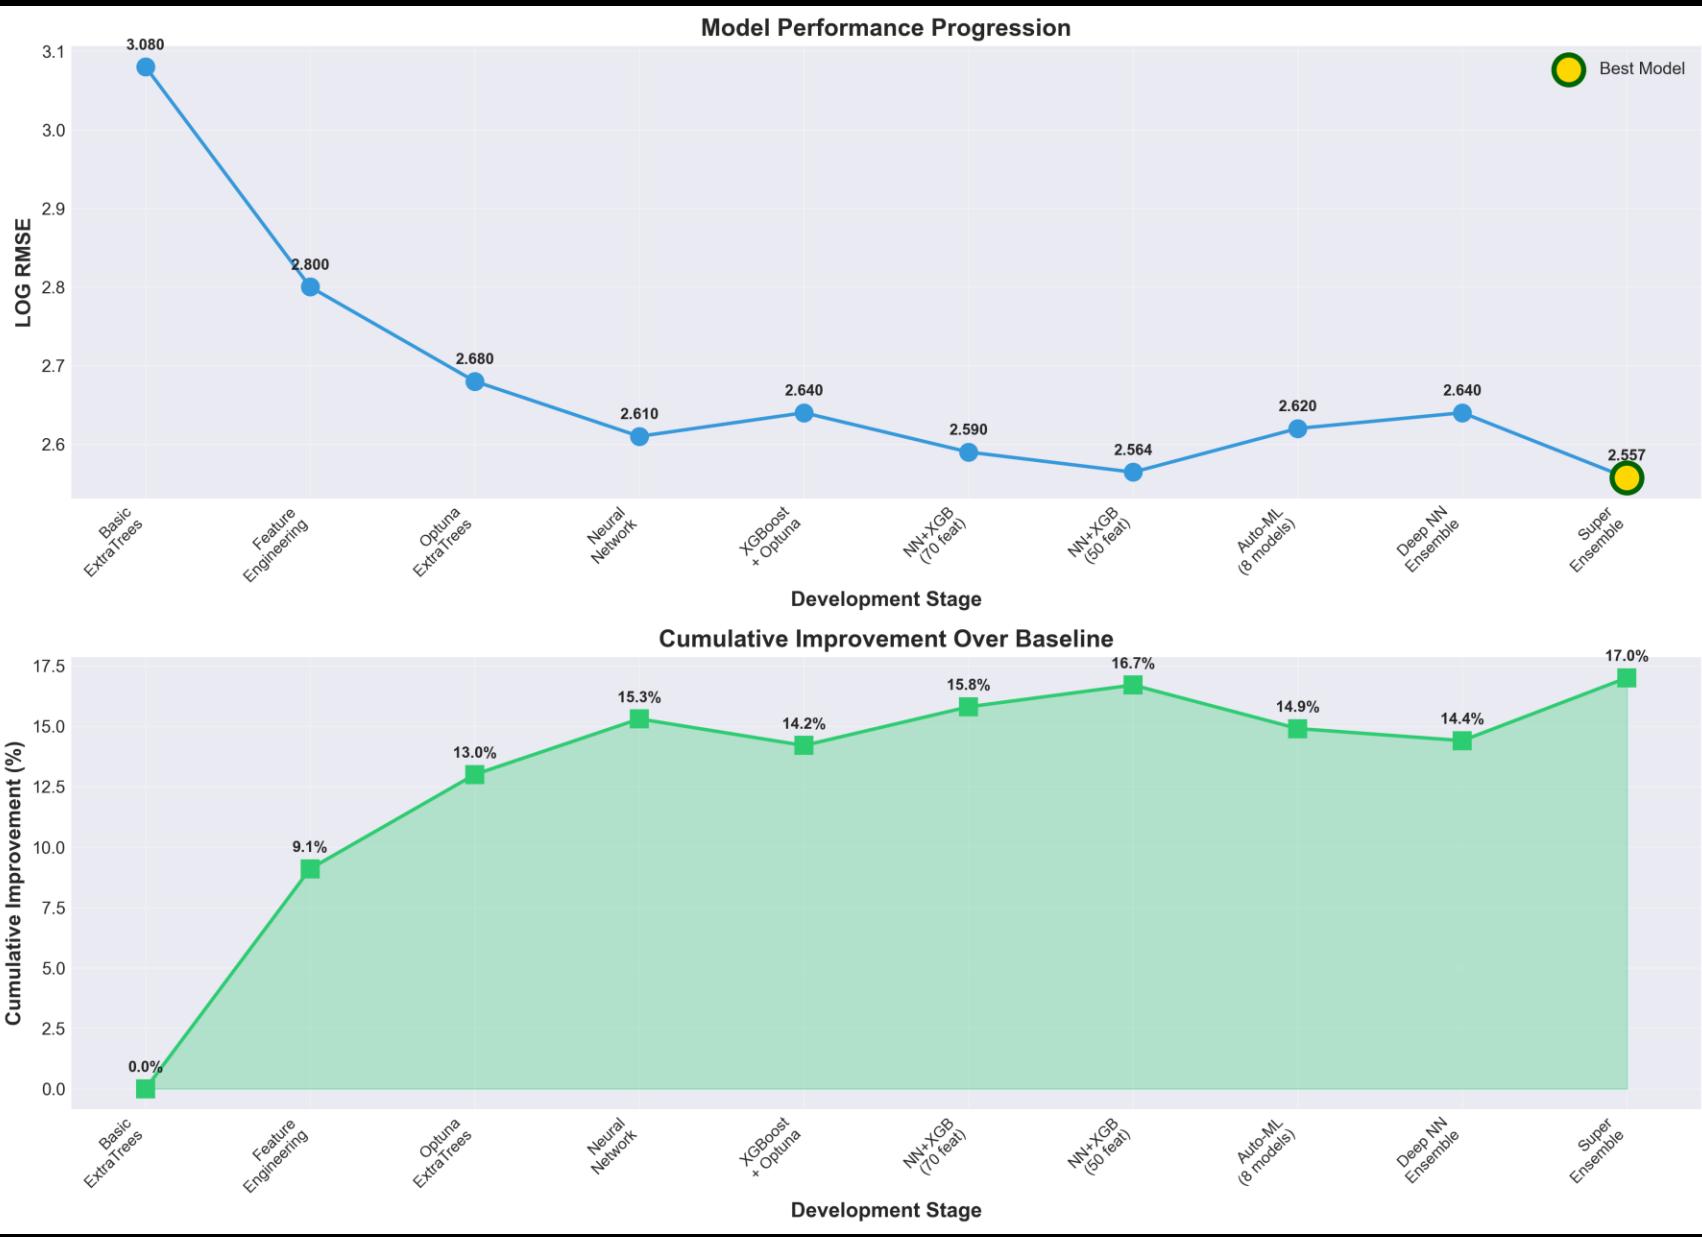

## AI-Driven Sustainability Intelligence

The MVP leverages AI and structured ESG data to provide fast, scalable, and actionable sustainability intelligence globally.
